Tips of the month

DAILY

- Daily Dual Cab models (50C17D and 70C17D) are very popular in towed motorhome, horsefloat or similar applications. In order to support the required maneuvering and gradient capabilities of the vehicle, three different rear axle ratios have been made available for each of the two models. The standard ratio is designed to support an application with a standard semitrailer in terms of weight and dimensions (4.44 for 50C and 4.556 for 70C). A lower ratio is made available as a selectable option for applications where the vehicle is not towing, or is towing very limited trailers in terms of weight and dimensions (example: a small Bobcat), such ratios are 4.18 for 50C and 4.30 for 70C. A higher ratio is also made available where the application requires the towing of a larger trailer, and where the full GCM of the vehicle is reached (5.11 for 50C and 5.13 for 70C).
- Factory fitted Tray and 3-way tipper are now available as selectable options in MT-162-D price book. The 3 way tipper is a very flexible, versatile and European designed tool ideal for landscapers, councils and all those applications where space is limited and tipping on both sides represent a valid alternative to complex maneuvering.

Tips of the month

EUROCARGO

- EUROCARGO Model Year 2016 EURO 6 is now available in MT-162-E price book. With a higher capacity engine (6.7 litres), Driver Airbag, redesigned interiors and exterior and EURO 6 emission level, this new model is ideal for fleets with a special attention to the environment and safety requirements.
- In the same range of EUROCARGO EURO 6, the MLI80E28/P model has been reintroduced. This vehicle has a higher front axle rating (6500 Kgs) than the MLI60E28/P, making it the ideal vehicle for applications where the weight distribution requires additional weight on the front (i.e. day cab tautliners)
- EUROCARGO MLI50E28W 4x4 is now also available in a longer wheelbase version (4150mm via SVA) for applications where a longer body space is required (for example, firefighting)

Tips of the month

ACCO

- ACCO comes with a choice of 2 different rear suspensions. The right choice should be made according to the application of the vehicle:
 - ✓ HENDRICKSON HAULMAAX HMX460 is a rubber block suspension, light and cost effective. It is ideal where the vehicle tare weight has to be at the lowest level possible to ensure maximum productivity. Haulmaax, given its flexibility and strength characteristics is also ideal for off road applications, in mining or constructions environments, where normally a spring suspension is required.
 - ✓ HENDRICKSON PRIMAAX PAX462 is an air suspension, road friendly certified. It is ideal in applications where additional weight can be gained through the state regulation for Road Friendly suspension. It also offers stability in high center of gravity applications, such as concrete agitators.
- ACCO Compactors are available with pre-defined wheelbases, chassis drilling and components relocation according to the Body manufacturer. Price Book MT-162-A has a full list of selectable options with the specific name of the manufacturer of the body: J.J. Richards, Superior Pak, SOLO, MJE (now Bucher)

Tips of the month

STRALIS and POWERSTAR

- The entire range of Stralis Ati (CBU Imported models: 4x2 and 6x2 rigid, 4x2 and 6x2 Prime Movers) are equipped with EEV engines (enhanced environmentally friendly vehicle), a better than EURO 5 emission level. This feature is an attractive selling point for Customers and fleets with a special attention to the environment.
- Stralis 8x4 models are now available with Horizontal exhaust selectable option. This feature ensures maximum body space for maximum productivity.
- Stralis 8x4 is equipped with front air suspension, and a load sharing system. This feature guarantees constant equal distribution of weight between all axles and wheels, ensuring maximum tyre life and vehicle stability. It also supports an additional 1000 kg of load on the front axles (11 tons).
- All locally manufactured Stralis models are equipped with Differential Locks as a standard content.
- Powerstar models 6400 HD equipped with Cursor 13 engine are specifically designed to accommodate more demanding applications than the Lightweight 6400. Two specific configurations have been made available in January 2016 for 34 Pallet B-Double(6400 HD) and 60 Ton Tipper (6400 PBS).
